# INSTALLATION

```
$ Create your virtualenv (recommended, use virtualenvwrapper)
$ virtualenv env
```

```
$ # Clone repository
$ git clone git@github.com:muffins-on-dope/bakery.git
```

```
$ # Activate Environment and install
$ source env/bin/activate
$ pip install -r requirements/development.txt
```

```
$ # run tests
$ python manage.py test
```

# EDIT SETTINGS

Ignore development settings.

```
$ git update-index --assume-unchanged bakery/settings/development.py
```

This ignores all future changes to your local development settings.

Edit `bakery/settings/development.py` and adapt to your environment.

# SETUP THE DATABASE

```
$ python manage.py syncdb --migrate --noinput
```

## SUPERUSER & EXAMPLE DATA

```
$ # Create a new super user
$ python manage.py createsuperuser <Social-Username>
$ python manage.py importcookie <URL-to-GitHub-repository>
```

Now you can run the webserver and start using the site.

```
$ python manage.py runserver
```

This starts a local webserver on [localhost:8000](#).

Log in on that page with your social account and the social auth provider of your choice.
